

Major changes of the revised SS ICT curriculum

- The lesson time of programming in the Core Part of the Curriculum is increased from 24 hours to 48 hours. Students are required to write computer programs instead of describing the algorithms to solve problems only,
- The lesson time for the topics covered in the junior secondary level (such as word processing in office automation) is reduced, and
- The contents of the existing four options in the Elective Part are trimmed and merged into three options. Students are required to take two out of the three updated options in their study.
